

Innovation and Digitalization in IT

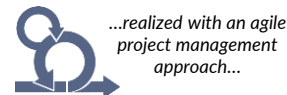

Evaluation of the current digitalization status and derivation of a customized digital strategy implies the implementation of measures on all layers of your organization

Internal & external drivers influence the digital strategy of the IT

- _ Changed expectations of employees towards management & leadership
- _ More decision power & possibility to work independently on projects for employees
- _ Digitalized & automated end-to-end processes
- _ Efficient & effective process design to better address customer requirements
- _ New technologies & frequent innovations
- _ Cutting edge technology increasingly based on IT

- _ Lean internal structures & external supplier networks
- _ Expectation to be a reliable & integral part of the business to provide value creating services for digital business models
- _ Increasing use of Agile methods & DevOps
- _ New digital skills required
- _ Demographic challenges
- _ Quickly changing & evolving job requirements
- _ Mobile & digital workspace
- _ More project work instead of daily operations

Your benefits

- _ **Comprehensive & customized digital strategy** that includes all perspectives of your digital transformation
- _ Setup of a dedicated initiative to **strengthen digital core capabilities, improve quality and leverage efficiencies**
- _ Enabling management to actively participate in the initiative in order to become a **role model for the change**
- _ Redesign **organizational** structures, optimize & automate processes as a foundation for a sustainable success
- _ Focus on **empowering an innovation culture** that proactively creates **value adding services** for the business
- _ **Shifting resources and expertise** from commodity services to digital competencies
- _ Ability to address **current challenges** such as sustainability and demographic changes as part of the digital strategy
